Department of Scientific and Engineering Simulation,
Nagoya Institute of Technology

August 9, 2012

Outline

① Installation

How to use this theme?

② Customization

How to change logo images?

How to customize colors?

What is the NIT?

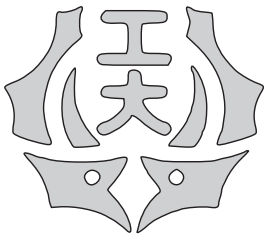

Figure : The logo of NIT.

- ▶ NIT is the acronym of *Nagoya Institute of Technology*.
- ▶ The author is *Ryo KOBAYASHI*, who is an assistant professor at NIT.
- ▶ Please contact to the author by e-mailing to *ryo.kbys[at]gmail.com*.
- ▶ This theme is not *Nagoya* (the city name where NIT exists), because there might be somebody who wants to make own theme in other institute in Nagoya.

How to use this theme?

1. Put beamer*NIT.sty and NIT*eps files to the place where the environment TEXINPUTS looks for.
2. Call this theme by putting `\usetheme{NIT}` in the preamble.
3. Copy preambles of this source file to your own source file, especially color definitions are important for how it looks.
4. Add “compress” to the option of beamer documentclass to keep the headline height fixed even if there are several subsections.
5. After the title frame, put `usebackgroundtemplate` and specify *NIT_bg.eps* as a background image.

How to change background and logo images?

- ▶ The background and logo images are NIT_bg.eps and NIT_logo.eps, respectively.
- ▶ Modifying those EPS images results directly in how it looks.
- ▶ Title bar in each frame is included in the NIT_bg.eps. Thus if you want to change frametitle, modify the NIT_bg.eps file.

How to customize the main color?

- ▶ Change color definition at the preamble, *NITMainColor*.
- ▶ Modify the background image, *NIT_bg.eps*, to change the color of the bottom of the frametitle banner.
