# Text and Lists

ordinary text

---

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

# Text and Lists

## itemised lists

- ▶ First item in a list
  - ▷ First item in a list
    - ▷ First item in a list
    - ▷ Second item in a list
    - ▷ Third item in a list
  - ▷ Second item in a list
  - ▷ Third item in a list
- ▶ Second item in a list

## with ordinary text

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gef-burn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

**Figure 1:** This is an example image from the mwe package.

**Table 1:** This is an example table.

	Column A	Column B	Column C
Row 1	A1	B1	C1
Row 2	A2	B2	C2
Row 3	A3	B3	C3

Mathematics can be included in-line or as a display. For the following examples we can substitute  $u = e^x$  and  $v = e^{-x}$  to save us some writing pain.

The fundamental tricks of algebra are adding zero (1a) or multiplying by one (2a).

$$\int \frac{dx}{1 + e^x} = \int \frac{du}{u(u + 1)} \quad (1a)$$

$$= \int du \frac{1 + u - u}{u(1 + u)} \quad (1b)$$

$$= \int \frac{du}{u} - \int \frac{du}{1 + u} = \dots \quad (1c)$$

$$\int \frac{dx}{1 + e^x} = \int dx \frac{e^{-x}}{1 + e^{-x}} \quad (2a)$$

$$= - \int \frac{dv}{1 + v} = \dots \quad (2b)$$

Writing about chemistry can be a tricky, but additional packages can make it easier. It is similar to mathematics and can be quite easily incorporated into it.

For example take the combustion of dihydrogen ( $\text{H}_2$ , **1**) with dioxygen ( $\text{O}_2$ , **2**) to form water ( $\text{H}_2\text{O}$ , **3**). The reaction seems quite simple:

The mechanism is much more complex and even scheme 1 is incomplete.

**Scheme 1:** Incomplete reaction mechanism of the combustion of **1** and **2**.

# Multiple columns

symmetric columns

For example

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense?

1. First item in a list
  - 1.1 First item in a list
    - 1.1.1 First item in a list
    - 1.1.2 Second item in a list
    - 1.1.3 Third item in a list
  - 1.2 Second item in a list
  - 1.3 Third item in a list
2. Second item in a list
3. Third item in a list

# Multiple columns

asymmetric columns

For example

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense?

For example

This block comes first.

And this is highlighted

And the *usual* blindtext:
